Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-18, drawn to a method for biocontrol of flies, classified in class 424, subclass 405.
- II. Claims 19-20, drawn to a biocontrol system and method, classified in class 435, subclass 287.1.

The inventions are distinct, each from the other because of the following reasons:

Groups I and II are related as methods of biocontrol, however, the process steps of Group I are different and distinct from those of Group II of which also comprises a biological control system which is not required by the method of Group I. Further the process steps of Group I require determining population densities whereas the process of Group II does not require this distinct step for carrying out the process. Therefore, two-way distinctness exits between Groups I and II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
